

Hirlekar Precision manufactures quality differential pressure instruments designed to measure the difference in pressure between two points in a system and show it on a single dial instrument. A magnetic movement senses the differential pressure.

These piston instruments can indicate small values of differential pressure even when used at high line pressures. They provide instantaneous and continuous information regarding system conditions helping in eliminating premature servicing of equipment, avoid unscheduled down time of costly processes and detect abnormal system conditions.

Switching Facility: Instruments can be supplied with reed switches to initiate alarms, activate other equipment, or shut the system down. Two switches are used when high and low limits are desired. Gauge-switch models provide the user with both, gauge readout and switch operation.

## APPLICATIONS:

Filters, Hydraulic systems, Water treatment plants, Chemical plants, Natural gas processing, Heat exchangers, Gasoline / Diesel engine filters, Pumps and Valves, Compressors.

## 200 DPG

Piston Instruments

## SALIENT FEATURES

Cost effective and reliable.
Simple and compact design.
Easy to read dial instrument eliminates accumulated errors of two instrument installations.
High operating pressure up to 200 bar. Differential pressure range up to 10 bar.
Over pressure safe from either side to maximum working pressure.
Adjustable reed contact switching.
Indicating mechanism isolated from pressure chamber.
Only switch is also available.
Wide applications in air, gas and liquid media.
Manufactured in ISO certified plant.
Exported worldwide.

## MACN= IC PRINCIPLE

## OPERATING PRINCIPLE

High and Low pressures are separated by a sensor assembly consisting of a magnet, piston, Teflon seal and a range spring. The difference in pressure causes the sensor assembly to move in proportion to the change against a range spring.

A rotary magnet, located in a separate body cavity and isolated from the acting pressures, is rotated by magnetic coupling as per the linear movement of the sensor assembly. A pointer attached to the rotary magnet indicates differential pressure on the dial.

Switch : Reed switches are located adjacent to the pressure chamber and are activated by the magnetic field of the sensor assembly.

## TECHNICAL DATA (MODEL 200 DPG)

Ranges
Units of calibration
Operating principle
Working pressure
Accuracy
Dial sizes

Body Material
Temperature
Protection
Migration of media
Connections
Wetted parts

Seals
Porting
Switch

Dial case
Window
Mounting
Other options
: 0-0.25 to 0-10 bar
: $\mathrm{Kg} / \mathrm{cm}^{2}, \mathrm{kPa}$, bar, mbar, psi.
: Magnetic coupling using piston \& spring.
: 200 bar / 3000 psi for Aluminium \& 400 bar / 6000 psi for SS-316
: $\pm 2 \%$ of FSD (Ascending)
: $\quad 2$ " $(50 \mathrm{~mm}), 2.5^{\prime \prime}(63 \mathrm{~mm}), 3.5^{\prime \prime}(80 \mathrm{~mm}), 4^{\prime \prime}(100 \mathrm{~mm}), 4.5^{\prime \prime}(115 \mathrm{~mm}), \&$ 6" (150mm)
: Aluminium, SS-316, \& Brass
: $80^{\circ} \mathrm{C}$ Max. for the media.
: IP 65 for gauge.
: Marginal
: $\quad 1 / 4^{" 1} \mathrm{NPT}(\mathrm{F})$ or $1 / 4$ " BSP(F) (on request,longer lead time)
: Body material, PTFE, SS 304 spring, screw, and ceramic magnet.
: Buna-N (Standard), Viton
: In-line, Bottom, or Back
: SPST or SPDT, one or two. Switches are field adjustable. The set points can be increased or decreased externally with simple screwdriver adjustments. When two switches are used, either switch can be adjusted independently. These switches are C $\epsilon$ certified.

Switch unit can also be installed later on gauges with in-line and bottom porting.
: $\quad$ Stainless steel case and flange (Standard)
: Glass ( Standard ) Acrylic, Toughened glass on request. Direct, front panel flange, 2" pipe.
: Glycerine filling, red resettable follower pointer,dual scale, strainer in (+) connection, dual scale.
